Department of Computer Science, IST, Islamabad.

Abstract

This Self-help program is designed to determine the mental illness from a list of mental illnesses a patient can have, and then tend to their illness in attempt to improve their mental health in a significant way while keeping track of their stress levels in case they may be a danger to themselves.

Introduction

The Base class 'mental_illness' will inherit subclasses like anxiety, depression, Insomnia, ADHD, and OCD. The base class will also store the user's data, so if the user wishes to access patient data they can. In each sub class there will be member functions to aid the user in self-care. (i.e., exercises, advice, etc.) Some mental illnesses are specific towards the source of how the user developed the mental illness, so these sub classes may inherit further subclasses (multi-level inheritance) or not depending on the illness.

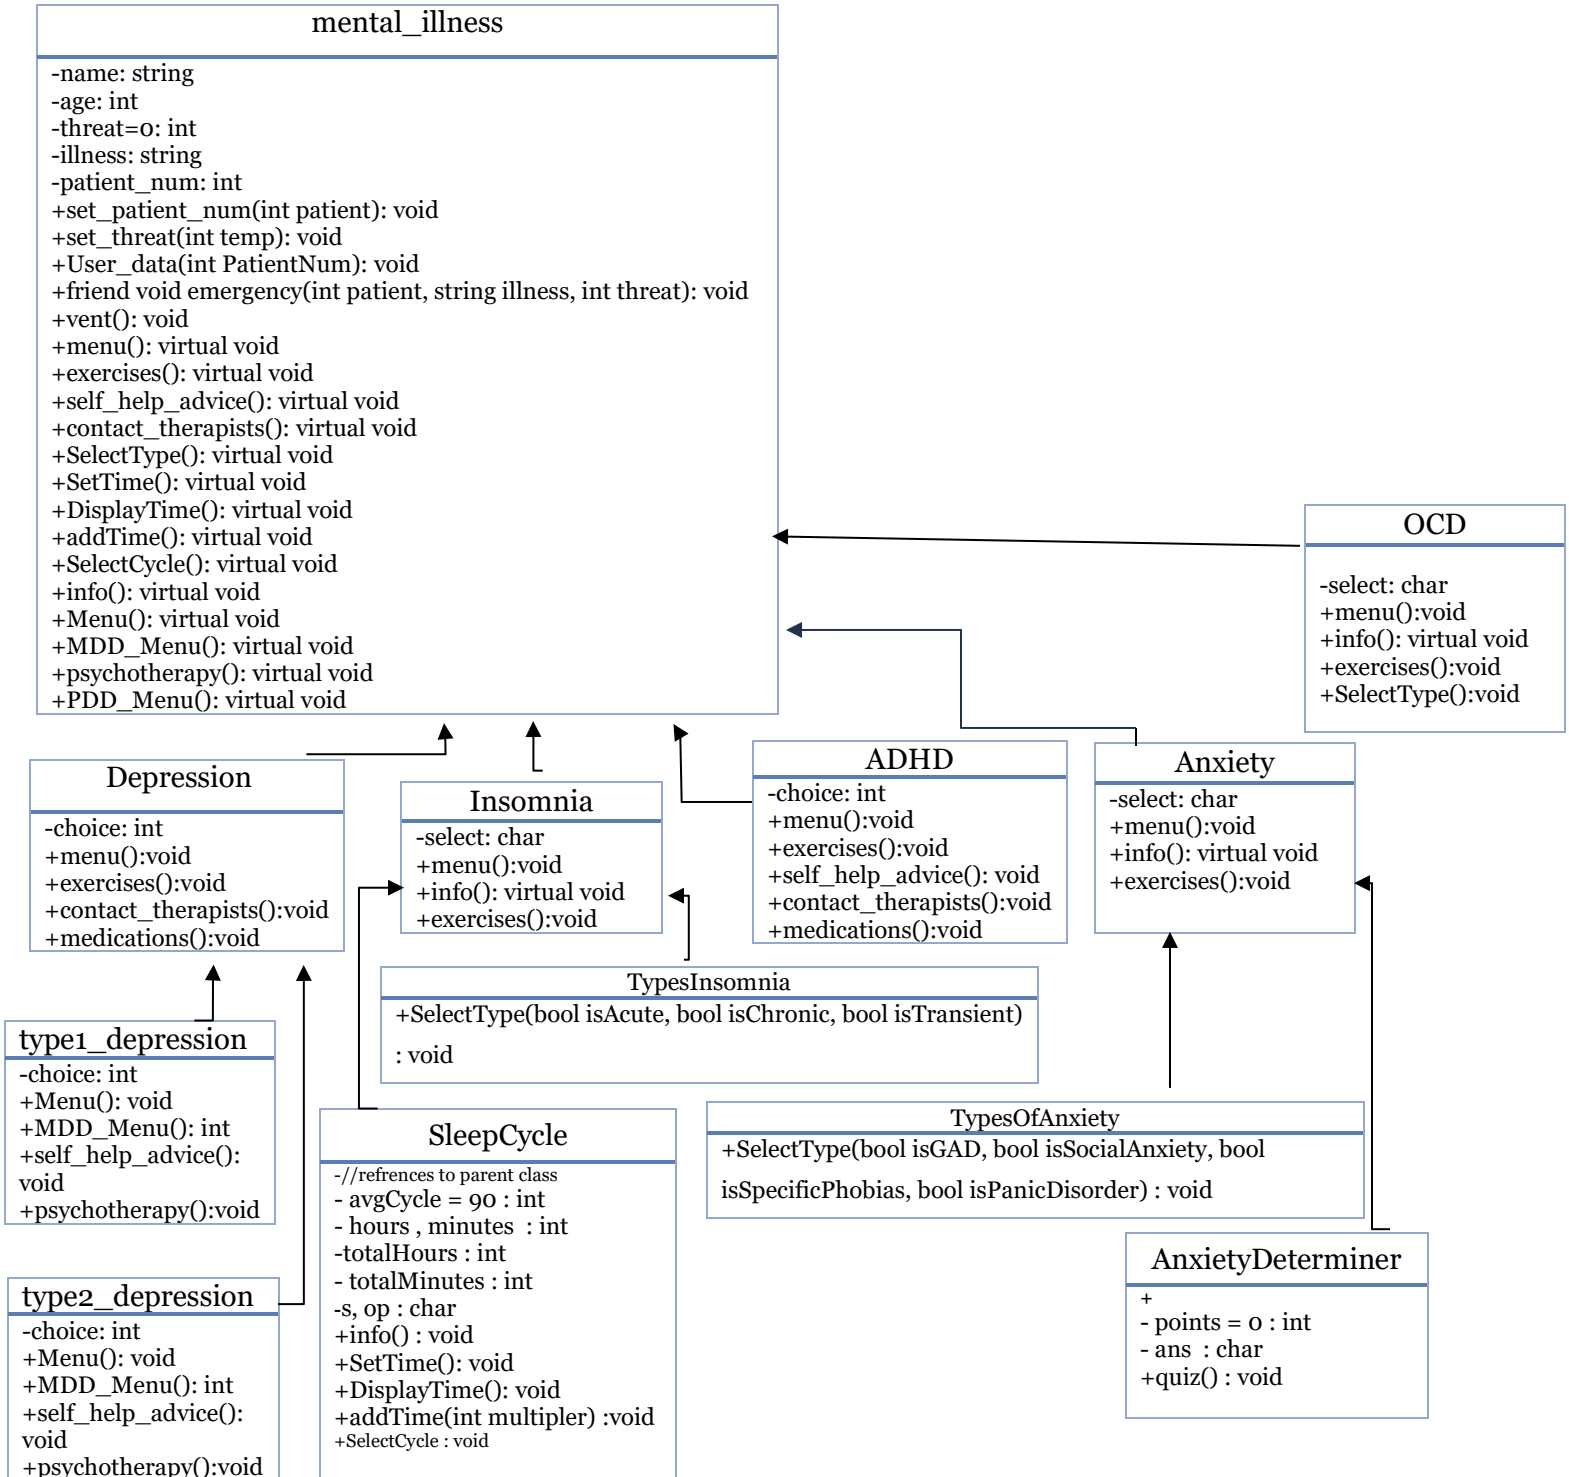

A friend function will be used in each sub class for emergency purposes in the scenario that the user's life is in any danger. The program can identify if the user is in any danger because the program will ask the user a questions('s) to which the user will respond regarding their state (suicidal, panic attacks, etc.)

The int Main will call a main function which includes a quiz and main menu to determine the illness if needed.

Methodology

An array of objects is created to tend to each patient (according to the number of patients the user wishes to appoint.

Inheritance Diagram:

The rest of the code is explained with the use of comments in code.

Specifications

This program facilitates the user with detailed knowledge and guidance and creates awareness among them on what mental illness they might have and what measures they must take to reduce the symptoms. Apart from this following are the specifications of this Self-Help Program:

1. Allowing the user to choose number of patients that would like to run the self-help program.
2. Directing users who know their illness directly to a separate menu for each illness.
3. For users who aren't aware of their illness, a separate quiz is called which gives a detailed report on about the illness threat levels.
4. The 5 different menus for mental illnesses provide the user with complete guide on how the user can improve their symptoms through either medication or exercises, or they'd like to call for medical assistance.
5. Furthermore, the illness type is also observed in some cases to get more precise diagnosis and guidance.
6. A separate quiz is made for determining Anxiety in patients.
7. Sleep Cycle calculates the best time to wake up, without disturbing that REM sleep for Insomniac patients.
8. An emergency function is called in case of high threat level, which either tries to calm down the patient or calls an ambulance for them.

TypeWriter("\n\nInsomnia is usually a transient or short-term condition. In
some cases, insomnia can become chronic or long term. Insomnia is said to be chronic if
the patient experiences difficulties in sleeping at least three days a week for at least a
month.\nChronic insomnia may be primary or secondary. Primary chronic insomnia is
also called idiopathic insomnia because there is no specific cause. Secondary chronic
insomnia is also called comorbid insomnia. Comorbid insomnia is more common than
primary insomnia and occurs due to other underlying medical conditions
(comorbidities).\nCommon causes of chronic insomnia include the following:\n", 35);

Result Discussion

As we recommend running the code on Visual Studio Code, here are some of the screenshots that will help give some understanding of output.

```
C:\Windows\system32\cmd.exe

Self Help Program

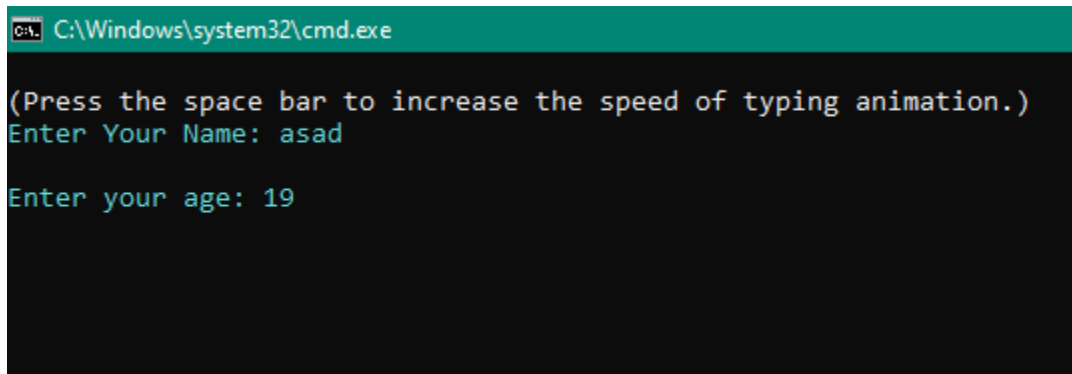

Welcome to the Self-help program! We aim to determine your illness and aid you in health. How many patients do you wish to see:
2

Welcome! Please choose an option that best fits you to continue:

1. I know my mental illness.
2. I dont know my mental illness 1
-----
[>>] Depression
[>>] Insomnia
[>>] Anxiety
[>>] ADHD
[>>] OCD

Enter Illness: Depression
```

As we can see from above, the main menu lets us choose from two options. If we select the first option, it lets you choose from a list of illness. If we select the second option, it chooses an illness on the basis of quiz that it took.

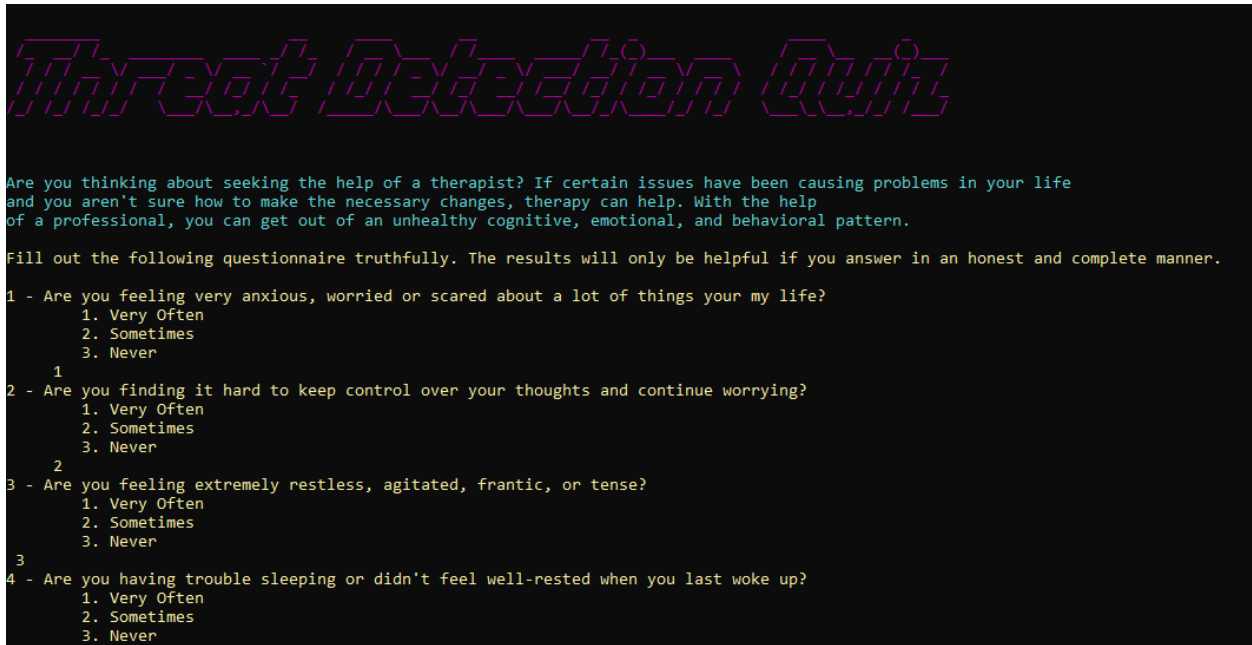

```
C:\Windows\system32\cmd.exe

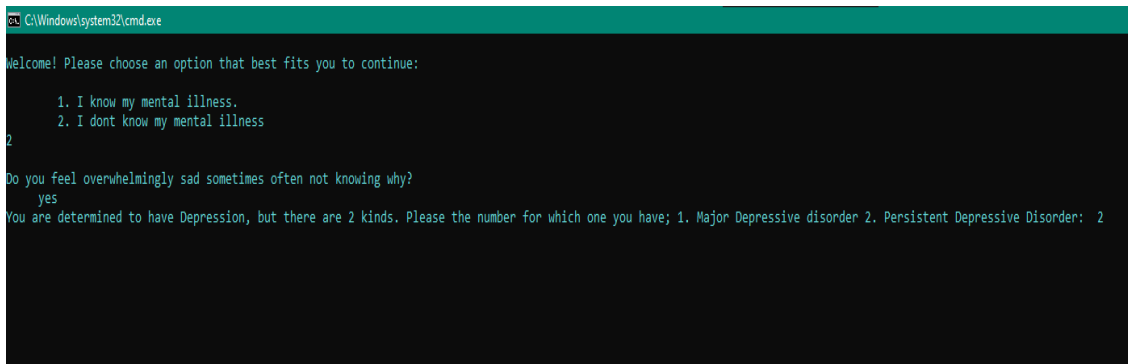

(Press the space bar to increase the speed of typing animation.)
Enter Your Name: asad

Enter your age: 19
```

When an illness is chosen, it lets us input our name and age.

The threat detection quiz is used to give us information related to the intensity of mental illness that we are having. This quiz asks around 20 set of questions and then give detailed analysis of the various types of mental illness.

The above are the two main types of depression, selecting one would take us to their respective menus.

```

3. Never
1
19 - How often do you feel positive about your life?
1. Very Often
2. Sometimes
3. Never
3
20 - Have you been having suicidal thoughts recently?
NOTE: CHOOSE THE OPTION CAREFULLY
1. Very Often
2. Sometimes
3. Never
1
Your Threat level is: 16
Your symptoms are high at this time. You could still benefit from talking to a professional and seek medical advice as soon as possible for improvement of your r

Would you like to get detailed results for your illness threat level?
yes

Your Depression Threat level is: 14

You display mild symptoms of depression. This issue does not seem to be serious at this time, but your symptoms - as indicated in the test - should be monitored
If they get any worse or persist for a prolonged period of time (weeks or months), you should consider consulting a health professional.

Your Anxiety Threat level is: 14

You show symptoms of the anxiety with a high risk level. While they have not reached the level of full diagnosis,
seeking the advice of a therapist is recommended, as the symptoms may become overwhelming, more frequent, and more serious.

Your OCD Threat level is: 12

You show symptoms of the OCD with a high risk level. While they have not reached the level of full diagnosis,
seeking the advice of a therapist is recommended, as the symptoms may become overwhelming, more frequent, and more serious.

Your ADHD Threat level is: 9

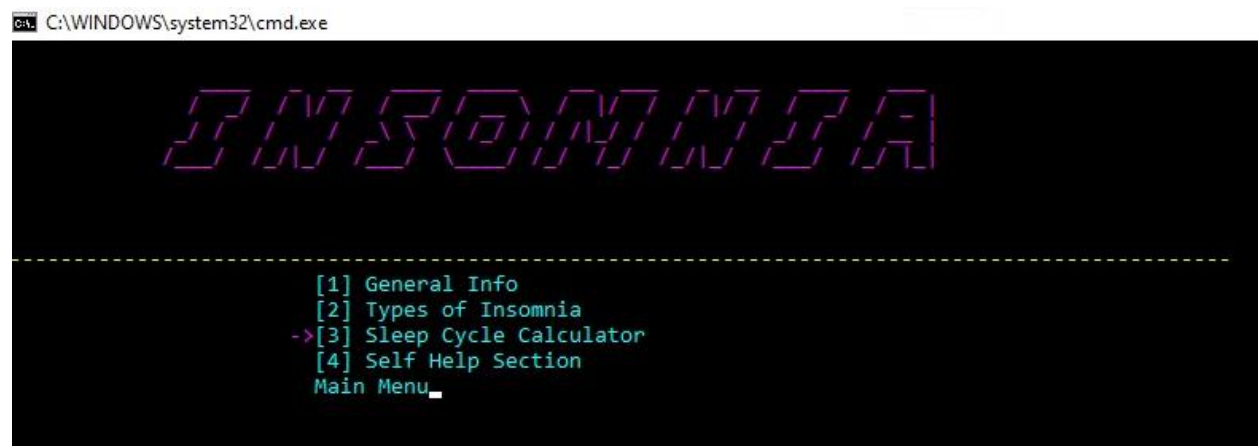

You show symptoms of the ADHD with a high risk level. While they have not reached the level of full diagnosis,
seeking the advice of a therapist is recommended, as the symptoms may become overwhelming, more frequent, and more serious.

Your Insomnia Threat level is: 7

You show symptoms _

```

As we can see from the above, the quiz will give us detailed information of our mental health related problems and take us to the menus of either Depression, Insomnia, anxiety, ADHD, OCD etc. depending upon our choice of selection we did before.

Main menu of Insomnia above.

WINDOWS\system32\cmd.exe

Main menu of OCD above.

C:\ Select C:\WINDOWS\system32\cmd.exe

```
(Press the space bar to increase the speed of typing animation.)  
Are your muscles tense or heart racing? (enter yes or no)  
yes  
Do the following:  
    Close your eyes, and deep breathe for 20 seconds.  
    Stand up and stretch for at least 5 minutes.  
    Take a walk out of your current environment  
Deep breathing can help as it releases anxiety and relax your body from head to toe.  
Do you feel better now? (yes or no)  
yes  
Stay safe.  
Congrats! Your stress levels have decreased significantly  
Do you want to go back? (Yes / No): _
```

In the above image, an Emergency friend function is called.

Conclusion

Mental health is important at every stage of life, from childhood and adolescence through adulthood. When there's so much information over the Internet one can get easily confused what to follow and what not. This is where our program comes into the picture, this program summarizes all the useful data in one whole and provides a user-friendly platform. Basically, being an all-in-one guide to treat your mental illnesses.
